

# Normal Stress in an Axially Loaded Member

$\nabla$  - Normal Stress

Normal Stress at a Point

$$\nabla = \lim_{\Delta A \rightarrow 0} \frac{\Delta F}{\Delta A}$$

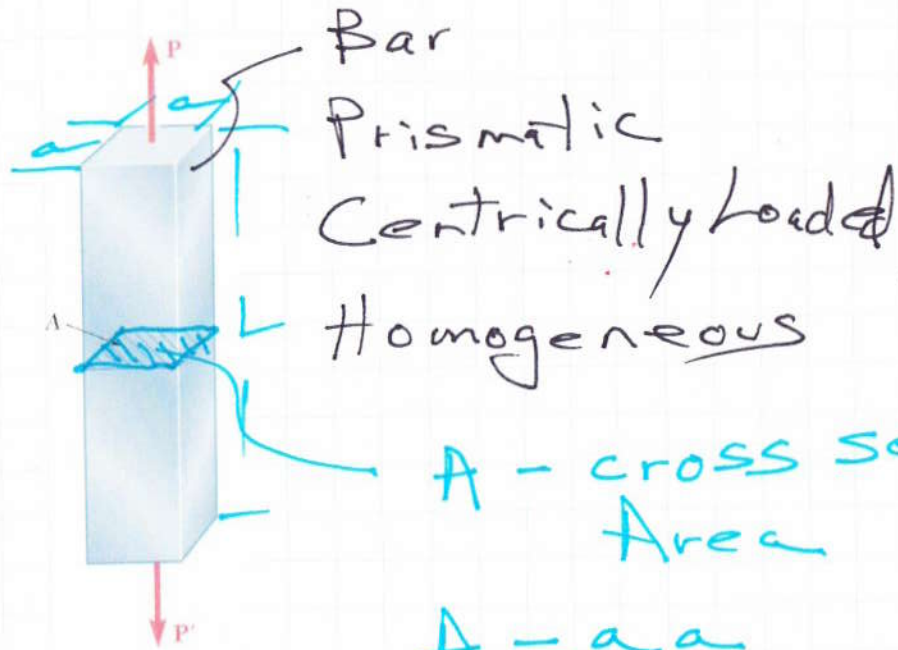

Normal Stress at a Point.

$$P = \int_{\text{Area}} \sigma dA$$

The line of action of the stress has to be colinear with the applied load  $P$ .

# Uniform Axial Stress

A - cross sectional Area

$$A = a \cdot a$$

$$A = a^2$$

perfectly Uniform

$$\sigma_{AVG} = \frac{P}{A}$$

$$\frac{l_b}{in^2}$$

$$\frac{K}{in^2}$$

$$\frac{N}{m^2}$$

$$\frac{N}{mm^2}$$

$$\frac{\text{Force}}{\text{Unit Area}}$$
