

Qualitative Grading Rubric

Prepared by
W. Lynn Beason, Ph.D., P.E.

Score	Solution Description
10	Perfect solution no errors.
9	Correct concept. Correct approach. One minor calculation error such as failure to punch numbers correctly on calculator, but all equations and setups are correct. A wrong sign does not qualify because it indicates a lack of understanding of sign conventions. Confusions over units do not qualify.
8.25	Intermediate value between 7.5 and 9.
7.5	Correct concept. Reasonable approach. As many as two mistakes such as units problems, or mistakes in intermediate calculations.
6.25	Intermediate value between 5 and 7.5.
5	Wrong concept. Many mistakes.
3.75	Intermediate value between 2.5 and 5.
2.5	Wrong concept. Solution essentially devoid of logic.
0	Nothing on the page

Excessive irrelevant material associated with solution or disorganized presentation results in a further deduction of 2.5.

The intermediate values are not used for homework and pop quizzes.
